

Ease-of-use is the Key to Successful IT Services

Backup services based on SysStor Online Backup technology require few resources to provide backup as a service that ensures high customer satisfaction.

Solutions Tailored for Private and Business Users

SysStor Online Backup™ is available as SysStor Online Backup™ Standard and Advanced. While both support almost any Microsoft platform and operating system, SysStor Online Backup™ Advanced enables the use of Agents for Microsoft SQL and Exchange. ISPs may easily tailor backup services to the individual needs of either private or business users - for greater user satisfaction.

Reliable, High-speed Data Protection

SysStor Online Backup™ reduces the size of data backups to deliver the fastest backup times possible using low bandwidth. With FastBIT™ technology, SysStor Online Backup™ implements the sector's most efficient backup software. FastBIT™ reduces the size of backups by up to 99%. A new storage algorithm adopted in version 7 further raises the all-over performance up to another 20%. All of the backup processes are recorded in detailed logs. ISPs may easily provide reports at customers' request.

Scalability for Successful Companies

IT service providers remain flexible with SysStor Online Backup™. In cases of high customer demand and fast growth, additional licenses or increased storage capacity can be added without any disruption to existing services. Bandwidth throttling allows the efficient use of resources by limiting the bandwidth capacity. SysStor Online Backup™ also has a complete SOAP/XML account user interface that facilitates simple integration with the existing invoicing system. SysStor Online Backup™ offers remote client configuration. It permits backup client settings to be configured remotely from the backup server. Service providers and administrators receive direct control over remote clients.

Intelligent and Simple Backups from Any Location

SysStor Online Backup™ allows users to quickly automate the backup of important files at an easy-to-use interface. In addition to allowing the selection of single files, files of a particular program and folders SysStor Online Backup™ features „smart selection“. The feature offers users easy identification of all files of a particular type, such as photos, emails, and personal documents, wherever they are stored on the hard drive. „Smart selection“ reduces the technical knowledge required for professional data backup to a minimum, and speeds the identification of important data types for professionals. SysStor Online Backup™ also tracks backup versions to ensure that recoveries of any version can be carried out quickly and easily at anytime, anywhere.

Confidential and Secure

SysStor Online Backup™ uses advanced technologies and data protection industry standards to guarantee that their customers' data is protected. All data is encrypted, compressed and only then transferred via the internet.

Additional Language Support

SysStor Online Backup™ is available in a wide range of languages to simplify installation and use for users.

Professional Expert Support

SysStor Online Backup develops stable, user-friendly and extremely reliable software. Still, when technical support is needed, SysStor Online Backup is happy to answer any questions via e-mail or by telephone. Based on individual agreements, SysStor Online Backup provides comprehensive technical support for detailed projects, maintenance and upgrade protection.
